

Cybersecurity Awareness Report

Phishing Attacks

What is Phishing

Phishing is a type of cyber attack where attackers trick users into revealing sensitive information such as passwords or credit card details by pretending to be a trusted entity.

How Phishing Works

Attackers usually send fake emails or messages that appear to be from legitimate organizations. These messages often contain malicious links or attachments.

Common Signs of Phishing

- Suspicious email addresses
- Urgent or threatening messages
- Fake links
- Spelling and grammar mistakes

How to Prevent Phishing

- Do not click unknown links
- Verify the sender
- Use strong passwords
- Enable multi-factor authentication

Conclusion

Phishing attacks are one of the most common cybersecurity threats. Awareness and proper training can significantly reduce the risk.
